BLAKES EXTERNAL CORNER PROFILE 2.0M

The purpose of the Blakes External Profile is to allow the construction of walls without the need to build up corners first. The time saved and greater accuracy have made this the accepted method of construction for 1000's of satisfied customers – they never go back to constructing corners in the old traditional way.

Available in: Powder Coat (various colours)
Zinc
Zinc and Green Powder Coat Gauged
2.6M (Powder Coat (various colours), Zinc and Zinc Gauged)

BLAKES INTERMEDIATE PROFILE 2.0M

The Profile was designed to carry a line on a flat wall. Sometimes referred to as a deadman profile to support a long line, although it is often used in this way it is probably the most versatile profile. Other applications include, on a 3-wall extension taking the line either from an existing wall to the first Blakes Corner Profile and then receiving the line from the second Blakes Corner Profile enabling the entire build area to be covered by profile supported lines. Where a wall is erected between 2 existing walls (i.e. dividing a room in two – a Blakes Intermediate Profile can be erected on the first 2 courses at each end of the new wall to carry the line closely and accurately.

Available in: Powder Coat (various colours)
Zinc
Gauged

BLAKES REVERSE EXTERNAL PROFILE 2.0M

Used to cover internal corners, usually used completing large new build where the structure is 'L' shaped and therefore has 5 external corners and one internal corner.

Available in: Powder Coat (various colours)
Zinc

BLAKES ULTIMATE GAUGED BOX PROFILE

Made from the same steel as Blakes Building Profiles therefore can be used with a magnetic level. 75mm laser gauged on one corner. Have radius corners which will not damage line. Distortion due to heat soak not an issue as made from steel. Designed to match Blakes Building Profiles fitted with caps top and bottom. Can be used with a variety of widely available clamps.

Available in: Zinc

BLOCKDOLLY

Provides a solution for blockwork corners. Extends the use of Blakes Corner Profiles to allow lines for internal blockwork and exterior brickwork to be run from the same profile. This allows the construction of both cavity skins without building up corners first. Both lines are set from the same point which ensures cavity width from damp proof course to wall plate. Blockdolly can be used with Blakes External, Blakes Reverse, Blakes Intermediate or any combination to cover all situations.

BLOCKDOLLY EXTENSIONS

Available in 3 lengths – 150mm, 200mm and 250mm. Extends the Blockdolly to cover wide cavities. N.B. Can only be fitted to the later Blockdolly which has 3 extension mounting holes.

PDQ CLIP

A versatile accessory which solves the following problems: The first projects line accurately when a Blakes Corner Profile is mounted on a plinth course or quoin corner to cover face work (up to 108mm projection). The second use projects line from the face of a Blakes Corner Profile to cover dentil courses 5mm to 30mm projection. The third use enables a Blakes Reverse Internal Profile to be adjusted off the internal corner 10mm to allow pointing.

BLAKES BOOT WASH

The Blakes Boot Wash has become the solution of choice to fulfil Health and Safety Obligations on site. Boots can be washed in one simple movement by passing through the water and 3 brushes contained in the Boot Wash. Can be used with disinfectant.
